

LG-03PT4D94H-302C-B PHOTO TRANSISTOR **DATA SHEET**

SPEC. NO. : <u>SZ20071702</u>
DATE : <u>2020/07/17</u>
REV/ A/0

REV. <u>A/0</u>

Features

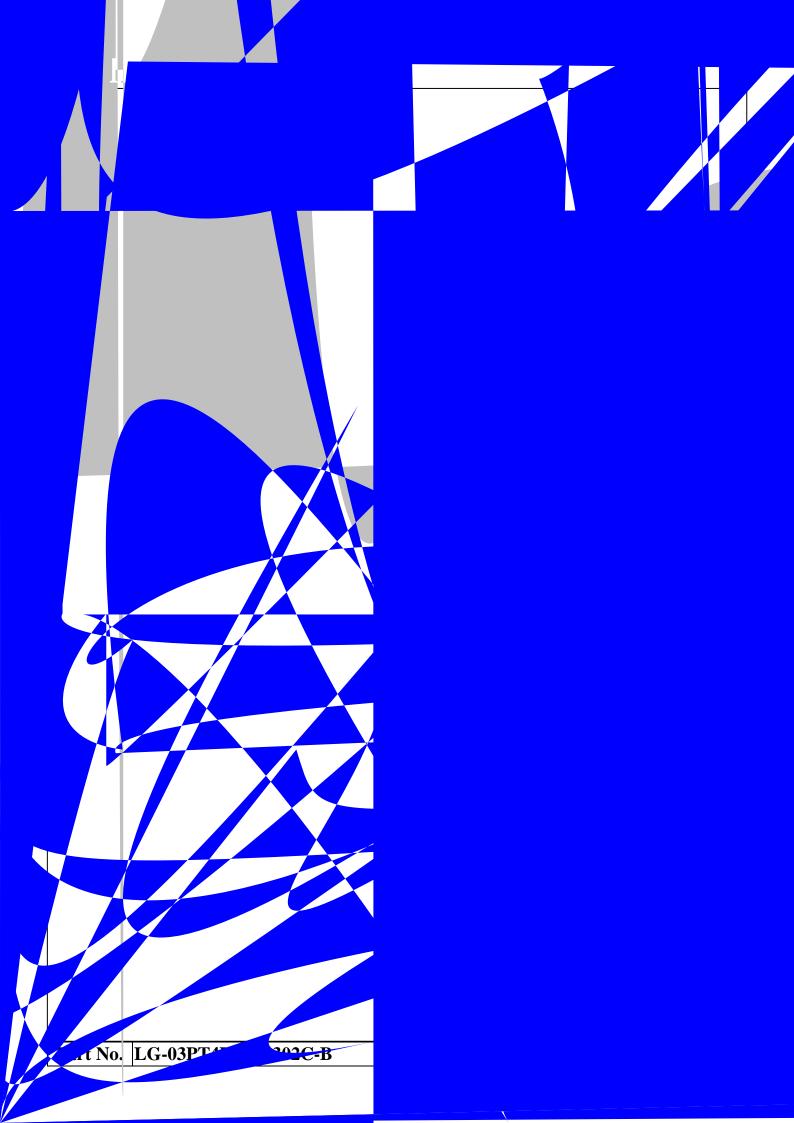

- ♦ Pb free product RoHS compliant
- ♦ High PhotoSensitivity
- ♦ General purposteads
- ♦ Reliable and rugged
- ♦ Long life solid state reliability

Package Dimension

Notes:

- 1. All dimensions are in millimeters
- 2. Tolerance is±0.20mm unless otherwisnoted.
- 3. Protruded resin under flange1is0mm max
- 4. Lead spacing is measured where the leads emerge from the package.
- 5. Specifications are subject to change without notice.

LEAD FORMING PROCEDURES

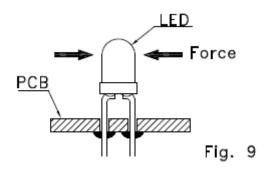

1. Maintain a minimum of 2mm clearance between the base of the Lens and the first lead bend (Fig.5 and Fig.6)

- 2. Lead forming or bending must be performed before soldering, never during or after soldering.
- 3. Do not stress the LED lens during leadrming in order to fractures in the lens epoxy and damage the ternal structures.
- 4. During lead forming, use tools or jigs to hold the leads securely so that the bending force will not be transmitted to the LED lens and its internal structures. Do not perform lead forming once the component has been mounted onto the (FCQB7).
- 5. Do not bend the leads more than twic(eFig.8).

6. After soldering or other hightemperature assembly, allow the LED to cool down to 50 before applyingoutsideforce (Fig.9). In general, avoid placing excess force on the LED to avoid damage. For any questions please consult with LIGHT representative for proper handling procedures.
